DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

2. Claims 1-33 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The present invention provides a new method, apparatus and computer product for encoding and decoding image data capable of maintaining the image quality and improving the compression rate at the same time (specification, page 3, lines 1-7). In particular, the new method, apparatus and computer product comprise the following features, which the prior art, either taken singly or in combination, does not teach:

- generating a virtual intermediate frame based on the matching; encoding an actual intermediate frame included in the image data based on the virtual intermediate frame (see independent claims 1, 5, 6, 28, 29, 30, and 31);

- generating a virtual intermediate frame based on computing a matching between the key frames thus separated; decoding an actual intermediate frame based on the virtual intermediate frame and the supplementary data (see independent claims 17, 21, 22, 32, and 33);

- an intermediate frame region, which stores data, related to an intermediate frame

generated based on a computed matching between key frames stored in said key frame region (see independent claim 26).
